FLORIDA VITAL STATISTICS 1988

INTRODUCTION

FOREWORD

This report summarizes data compiled from original birth, death, fetal death, marriage, and dissolution (of marriage) records filed with the Office of Vital Statistics (VS) as required by law. Standard forms recommended by the U.S. Public Health Conference on Records and Statistics are used for certificates of birth, death and fetal death.

Responsibility for filing birth certificates lies with the physician, midwife or other attendant. Funeral directors, or other persons acting as such, are legally charged with filing death and fetal death (of 20 or more weeks gestation) certificates. These certificates are then submitted to local registrars who in turn forward them to VS. Marriage and dissolution records are received by VS directly from the various courts. Induced abortion reports are sent in directly by the physicians, hospitals and clinics.

RESIDENT AND RECORDED EVENTS

Births and deaths are tabulated according to both the usual "place of residence" (events occurring to Florida residents regardless of the place of occurrence) and the "place of occurrence" (events occurring in Florida regardless of the usual place of residence). The former are herein referred to as "resident" events and the latter as "recorded" events. Prior to 1933, only recorded data are available.

Varying interpretations of the "usual place of residence" by Florida's many seasonal visitors and military families may influence the accuracy of resident tabulations to some extent, since the residence stated on the certificate is normally accepted without question. For births and fetal deaths, the mother's residence is used when it differs from the father's residence.

Marriage and dissolution of marriage data are by place of occurrence only; there is no interstate exchange of these records. However, Florida dissolutions of marriage are granted to legal residents only; so there can only be resident dissolutions.

AVAILABILITY OF DATA

In addition to data presented here, much greater detail is available from unpublished tables, and special statistical tapes and tables, upon request on a fee-for-service basis. Information concerning data available from these sources may be obtained from the Public Health Statistics and Records Registration Section, P. O. Box 210, Jacksonville, FL 32231-0042; Telephone (904) 359-6960 or Suncom 826-6960.

HISTORICAL BACKGROUND

This marks the 71th year of statewide collection of birth and death records, which began in 1917. Marriage and dissolution records have been filed with VS since June 1927.

CAUSE OF DEATH

The underlying cause of death is determined from death certificate medical information in accordance with procedures established by the World Health Organization (WHO) and the National Center for Health Statistics (NCHS). Standardized codes are assigned from the International Classification of Diseases (ICD).

To keep abreast of changes in medical knowledge, the ICD is revised approximately every ten years. Revisions and years used in Florida are:

<u>Revision</u>	<u>Years</u>	<u>Revision</u>	<u>Years</u>
Second	1917-1920	Sixth	1949-1957
Third	1921-1929	Seventh	1958-1967
Fourth	1930-1940	Eighth	1968-1978
Fifth	1941-1948	Ninth	1979-

Due to these revisions, some of which involve major changes, year-to-year comparisons of deaths by cause can be misleading, unless such comparisons span a period of years in which only one revision was used or in which the changes from one revision to another were minor.

The Ninth Revision contains major modifications of some sections, so that more deaths are now assigned under Eighth Revision rules, and vice versa. NCHS coded a sample of 1976 U.S. deaths by both the Eighth and Ninth Revision rules. The results were grouped by major causes and, for each of these, the number of Ninth Revision deaths was divided by the number of Eighth Revision deaths to produce a comparability ratio. For example, the comparability ratio for Suicide is 1.0032; this means that Ninth Revision coding of 10,000 death certificates will produce about 32 more Suicides than would Eighth Revision rules.

National comparability ratios are shown in Table P for Florida's leading causes of death. When comparing deaths from these causes for 1979 or later to those for 1968-78, the ratio multiplied by the earlier data (either the number of deaths or death rate) will yield an approximation of the data which would have resulted under Ninth Revision rules.

FLORIDA VITAL STATISTICS 1989

INTRODUCTION (cont'd)

POPULATION

Resident midyear population estimates for 1980 to 1988 were obtained from the Florida Population and Demographic Forecasts provided by the Office of Planning and Budgeting, Executive Office of the Governor. These estimates are being utilized pursuant to the data standardization resolution adopted by the Governor and Cabinet of the State of Florida at the Florida Consensus Estimating Conference. Age, race, and county components may not add to state totals due to adjustments resulting from calculations in rounding.

RACE

Race is usually counted as it is stated on birth, death, and marriage certificates, with such designations as "Hispanic" counted as white. For births, the race of the child is determined as follows: (1) White, if both parents are white or if one is white and the other is unknown or not stated, (2) Nonwhite, in all other cases where the race of at least one parent is known, or (3) Unknown, only when the race of both parents is unknown or not stated. Specific nonwhite races are assigned according to a somewhat complex coding procedure, copies of which are available upon request. The 1970 U.S. Census for Florida showed a population that was 15.3 percent black and less than .04 percent for all other nonwhite races. The 1980 U.S. Census showed 13.8 percent black and 2.2 percent for all other nonwhite races. This increase in the other nonwhite races results mainly from changes in the Census Bureau's definitions.

UNKNOWN

Tabular totals in this publication may include some records of unknown age, race, or sex. In these cases, the components shown will not add the total given.

COMPLETENESS OF DATA

Tabulation of data for this annual report was begun after allowing a reasonable time for receipt of late records. A few certificates were received after tabulation and thus are not included in this report. These records represent only a small fraction of the total, and their omission does not materially alter the facts presented.

COMPUTATION AND FOOTNOTES

The following procedures and symbols are used in all tables in this report:

- (1) All rates and ratios are rounded to the nearest tenth.
- (2) All rates and ratios that calculate to less than 0.05 are printed as "0.0".
- (3) Undefined rates and ratios, i.e., those with denominators of zero, are printed as "----".
- (4) Anomalous rates and ratios, i.e., those that calculate to greater than 999.9, are also printed as "----".
- (5) Unreliable rates and ratios, i.e., those with denominators less than 100, are followed by an asterisk "**".
- (6) All age-adjusted death rates (AADR) standardized to the U.S. 1940 standard population.

P O P U L A T I O N

FLORIDA VITAL STATISTICS 1988

Florida's population continued to increase in 1988, up 3.0 percent from 1987 and 27.2 percent since 1980. Despite this, the 1980-88 annual average growth rate of 3.1 reveals a slight decrease in the trend. During the 1970's, the growth rate averaged 3.6 percent annually.

The average annual numerical increase in population for 1970-79 of 292,752 includes a natural increase (excess of resident births over deaths) of 24,276. This results in an estimated net in-migration of 268,476 or 22,373 per month. This compares with a monthly in-migration of 11,482 during the 1960's.

The average annual numerical increase in population for 1980-88 of 334,140 has shown an increase from the average for the 1970's. The average monthly net in-migration of 24,537 an increase of 10 percent from the previous decade. Both whites and nonwhites had growth rate declines when comparing the 1980-88 annual averages with those for 1970-79 data.

Comparing Florida's population to that of the U.S., the nonwhite population was 15.1 percent of the state total in 1988, compared to the U.S. percentage of 15.3. In the 65-and-over age group, Florida was at 17.9 percent, well above the U.S. figure of 12.2 percent. The 14-and-under age group comprised only 19.0 percent of Florida's population versus 21.5 percent nationally (Table A).

Florida midyear population estimates are based on data furnished by the Office of Planning and Budgeting, Executive Office of the Governor. U.S. data were obtained from the Bureau of Census Current Population Reports, Series P-25 #1022.

Based on 1980 data, all four race/sex groups continue to show increases in life expectancy at birth. White females continue to have the greater expectancy at 78.9 years; followed by nonwhite females, 72.4; white males, 71.1; and nonwhite males, 63.8. Prior to 1980, white males had a greater expectancy at birth than nonwhite females, but that has since changed, while white females and nonwhite males maintained the top and bottom positions, respectively (Table B).

BASED ON DATA FURNISHED BY OFFICE OF PLANNING AND BUDGETING, EXECUTIVE OFFICE OF THE GOVERNOR.

L I V E B I R T H S

FLORIDA VITAL STATISTICS 1988

The general fertility rate in 1988 has increased by only 1.8 percent over the 1987 fertility rate. Although the increase is relatively small, it is in contrast to past trends which revealed a downward trend. Since the mid-1970's there has been an indication that the rates are beginning to rise slowly. The general fertility rates and the median age of mothers, for both whites and nonwhites, have also followed this pattern. The teenage groups continue to reveal a slight downward trend, although women in their thirties reveal an increase (Table D).

Live births to Florida residents continue to increase both in number and rate, as they have since 1977. In 1988 the number of live births rose by 5.1 percent, while the rate increased by only 2.1 percent. Both whites and nonwhites also reflect this general pattern, however, the rate for nonwhites remains nearly double the rate for whites (Table E).

The 1988 total low-weight live births percent showed no change from the 1987 percent of 7.7. The white male experienced a 5.5 percent low-weight births, an increase over the 1987 figure. The white female and nonwhite male experienced decreases to 6.5 and 11.3 percent respectively, while the nonwhite female percent remained unchanged. Studies have reveal-

ed that the risk of neonatal mortality is much greater for low-weight births as opposed to "normal" weight births. Low-weight births are classified as those less than 2500 grams or 5 1/2 pounds (Table F).

Physicians continue to be the attendants to about 90 percent of all live births for both whites and nonwhites. Despite this large percentage, physician deliveries have revealed a declining trend while midwife deliveries are beginning to increase and are thus becoming more widely utilized in deliveries. Among white live births in 1988, 92.3 percent were attended by physicians and 6.5 percent by midwives, as compared with 92.8 and 6.3 percent, respectively, for the 1987. Among nonwhites in 1988, physicians attended 89.6 percent of the live births and midwives 8.9 percent, as compared with 90.2 and 8.4 percent, respectively, for 1987 (Table G).

The percentage of live births to unwed mothers continues to increase in both number and rate, for whites as well as nonwhites. Since 1977 more than one-half of all nonwhite live births have been to unwed mothers. The median age for unwed mothers has increased since 1977, with the median age for whites and nonwhites being 23.1 and 22.4 years, respectively, in 1988 (Tables H and I).

Table D

FLORIDA VITAL STATISTICS 1988

In Florida, a fetal death certificate is required only when the gestation period is 20 or more weeks. The fetal death ratio has shown a general downward trend over the past decade despite slight fluctuations in both numbers and rates. The 1988 ratio of 9.4 has decreased 10.5 percent since 1978, even though the actual number of fetal deaths increased by 45.6 percent during the same period (Table J).

A neonatal death is a death which occurs within 28 days after the live birth. The combined total of fetal and neonatal deaths are referred to as "perinatal deaths", thus ranging from 20 weeks gestation through 27 days after the live birth. Both neonatal and perinatal rates continue their downward trends. These trends also continue for whites as well as nonwhites. The 1988 neonatal death rate has decreased 28.9 percent since 1980, while the perinatal rate has declined 18.2 percent. Both the neonatal and perinatal rates have decreased considerably over the past ten years (Table K).

Infant deaths are those which occur within the first year of life. Despite the variations in the number of deaths over the past decade, the infant death rate continues its downward trend. The 1988 rate of 10.6 per thousand live births has declined 26.9 percent since 1980. Over the same time period, whites and nonwhites have shown decreases of 27.1 and 25.8 percent, respectively. Despite these decreases, the rate for nonwhites remains about twice the rate for whites. The infant death rate, similar to the neonatal and perinatal rates, has also decreased considerably over the past decade (Table L).

G E N E R A L M O R T A L I T Y

FLORIDA VITAL STATISTICS 1988

Resident deaths increased 3.5 percent in 1988 to 131,389 while the death rate remained the same at 10.5 per thousand population. Florida's death rate actually declined during the early to mid-1970's before showing signs of increasing in the late 70's and into the early 80's. Continuing this increasing trend, the death rate for 1988 rose 1.9 percent over the rate of ten years ago. For whites the rate has shown little change over the past decade, increasing only 0.9 percent, while the rate for nonwhites has increased by 6.8 percent (Table M).

The age-adjusted death rate (AADR) continued its downward trend. The white and non-white rates were unchanged from 1987. AADRs are based on the number of deaths for each age group and take into consideration the changes in the likelihood of death based on the age distribution of the population. All AADRs used in this report are standardized to the U.S. 1940 standard population (Table N).

Data on disposition of remains is available only since 1980. These data show that during this period, the percentage of burials has decreased steadily while cremations has increased. In 1988, 47.5 percent of all recorded deaths resulted in disposition by burial, while 32.5 percent were by cremation. Removal from state accounted for 19.4 percent. Among the race breakdowns, burial accounted for 83.6 percent of all nonwhite dispositions as compared to only 43.0 percent for whites. Cremations were more prevalent among whites, accounting for 35.7 percent as compared with only 6.9 percent for nonwhites. Whites also accounted for more removals than the nonwhites with percentages of 19.4 and 8.8, respectively (Table O).

In 1988, six of the leading causes had the same ranking as in 1978. Changes in ranking occurred to Diabetes which rose from eight to seventh, Suicide rose from ninth to eighth, and Homicide which rose from eleventh to ninth. Chronic Liver Disease & Cirrhosis fell from seventh to tenth, and Atherosclerosis fell from tenth to

twelfth.

Among whites, for the same ten-year period, the three leading causes remained the same; Heart Disease, Cancer, and Stroke. C.O.L.D. rose to fourth while Accidents fell to fifth. Pneumonia & Influenza remained at sixth. Suicide fell from sixth to seventh, Diabetes rose from ninth to eighth, while Chronic Liver Disease & Cirrhosis dropped from seventh to ninth. Atherosclerosis remained the tenth leading cause.

For nonwhites, the five leading causes were the same as ten years ago; Heart Disease, Cancer, Stroke, Accidents and Homicide. Human Immunodeficiency Virus (HIV) ranked sixth, followed by Diabetes and Perinatal Conditions both remaining at seventh and eighth, respectively. C.O.L.D. rose from tenth to ninth and Pneumonia and Influenza dropped from sixth to tenth (Table P).

D I S S O L U T I O N S

FLORIDA VITAL STATISTICS 1988

The marriage rate decreased in 1988 to 11.0 per thousand population as compared to 11.2 in 1987. The number of marriages increased 1.5 percent over 1987, despite the drop in rate.

The dissolutions of marriage (including annulments) rate decreased 3.1 percent in 1988 to 6.3 per thousand population. The decrease in the marriage rate combined with the decrease in the dissolution rate has resulted in the ratio of dissolutions per 100 marriages to decrease to 57.0. This rate is the lowest since 1970, when the rate reached 53.7 per one hundred marriages.

Many of Florida's dissolutions are granted to persons who establish residency in the state specifically for this purpose. These cases account for most of the difference between the

Florida and U.S. dissolution rates, as well as for the high ratio of dissolutions per 100 marriages in Florida as compared to a provisional rate of 49.5 nationally in 1988.

This ratio in Florida continues to decline after reaching a peak in 1975 when the ratio was 74.3. As other states become more liberal in their divorce laws, the difference between Florida and the nation should continue to lessen (Table LL).

Table LL

MARRIAGES AND DISSOLUTIONS OF MARRIAGE, RATES PER 1,000 POPULATION AND DISSOLUTIONS PER 100 MARRIAGES, FLORIDA, 1960, 1970 AND 1978-1988

YEAR	NUMBER OF MARRIAGES	RATES	NUMBER OF DISS.	RATES	DISS. PER 100 MARR.
1960	39,315	7.9	19,511	3.9	49.6
1970	69,249	10.1	37,506	5.4	53.7
1978	95,327	10.3	66,018	7.2	69.3
1979	103,245	10.8	69,707	7.3	67.5
